The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 15 to 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lafon (4,177,290)

The Lafon reference teaches a method of making and a crystalline modafinil. The diphenylmethylthioacetamide is placed in a container. Hydrogen peroxide, an acid and alcohol are added to the container. The resultant modafinil is precipitated out of solution as a crystal. The crystal is then separated and recovered from the solution as a solid. The modafinil recovered is used as a pharmaceutical compound and as the purity to be used as one after the crystallization, note entire reference and examples. The sole difference between the instant claims and the prior art is the mineral acid. However, in the absence of unexpected results, it would have been obvious to one of

ordinary skill in the art to determine through routine experimentations the optimum, operable acid to be used in solution in the Lafon reference in order to crystallize a product with less impurities in the solid form.

Response to Applicants' Arguments

Applicant's arguments filed December 19, 2003 have been fully considered but they are not persuasive.

Applicants' argument concerning the Lafon reference is noted. However, there is no showing that the modafinil of the instant claims is any different from that of the prior art, outside of the means of manufacturing. It is noted, that the instant specification incorporates the Lafon reference for the oxidizing conditions used to obtain the modafinil. Also, the Lafon reference does teach a crystallization by the use of an alcohol.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the

Art Unit: 1765

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
